A pest is defined as any organism which causes harm or damage, in this case to mammals, birds, fish, reptiles or amphibians. Such pests may include insects, helminths, fungi, bacteria or protozoa. Plants with toxic effects on livestock are also included, but pests, parasites or pathogens of invertebrates are not. The first part of the directory covers books and reviews on animal health, while the second half considers primary literature, database libraries and information centres, and veterinary associations.

**Medical and Veterinary Entomology** Gary R. Mullen 2002-09-27 Medical and Veterinary Entomology is a comprehensive text and is primarily intended for graduate students and upper level undergraduates studying the medical and veterinary significance of insects and related arthropods. The book will also appeal to a larger audience, specialists and non-specialists alike, including entomologists, parasitologists, biologists, epidemiologists, physicians, public health personnel, veterinarians, wildlife specialists and others looking for a readable, authoritative book on this topic. The first two chapters provide overviews of medical-veterinary entomology and epidemiology, respectively. These are followed by individual chapters devoted to each group of insects or arachnids of medical-veterinary importance and the health problems they can cause including their role as vectors of pathogens. Each of these chapters provides an overview of the taxonomy, biology and ecology of the group, and is followed by separate sections on their medical and veterinary importance, then by a section on prevention and control and, finally, by a list of references and further reading. Nationally and internationally renowned contributing authors Up to date and new information that is easy to locate, with extensive subheadings and highlighted key words throughout text Includes extensive coverage of arachnids, including scorpions, solpugids, spiders, mites and ticks Designed for teaching several courses including Medical Entomology, Veterinary Entomology or combined Medical-Veterinary Entomology courses
